Body systems, Main organs & Functions

Our body consists of several parts or **organs**. Each organ has a job to do. The organs in the body do not work alone. They work together with other organs. Several organs working together perform one major function of the body.

BODY SYSTEMS	MAIN ORGANS	FUNCTION
Nervous system	Brain, spinal cord, nerves	Controls all functions of the body
Skeletal system	Bones	Gives shape to body; protects internal organs
Muscular system	Muscles	Movement of body parts
Circulatory system	Heart, blood, blood vessels	Carries food and oxygen to all parts of the body; collect waste materials
Digestive system	Teeth, stomach and large intestine	Digests food, which provides energy
Breathing system	Nose, lungs	Absorbs oxygen and gives out carbon dioxide
Excretory system	Kidneys, skin	Removes waste from the body
Reproductive system	Different in males and females	Produces children

I) Read the information given in the above table and answer the questions.

1. What are the main organs in the Nervous system?

2. What is the function of the skeletal system?

3. What is the function of the circulatory system?

4. What are the main organs in the digestive system?

5. Kidneys and skin are the main organs of which system?

II) Identify the skeletons: All the bones in our body form a framework called the **skeleton**.

Can you identify the animals whose skeletons are given here? Write the names.
