## TESTS FOR DIVISIBILITY OF NUMBERS

➤ **Learn the given divisibility rule.**

- **Divisibility by 9:** - If the sum of digits of a number is multiple of 9, then the number is divisible by 9.

**Example:1) 396**

Sum of the digits of 396 =  $3 + 9 + 6 = 18$

The sum 18 is a multiple of 9.

So, 396 is divisible by 9.

(by doing actual division you will get a remainder as 0)

**Example:2) 1007**

Sum of the digits of 1007 =  $1 + 0 + 0 + 7 = 8$

The sum 8 is not a multiple of 9.

So, 1007 is not divisible by 9.

(by doing actual division you will get a remainder, other than 0)

- **By using the above divisibility test, check whether the following numbers divisible by 9 or not.**

a) 5099      b) 297      c) 3333      d) 6021      e) 45999
